## AUTHOR'S DECLARATION

I declare that the work in this thesis was carried out in accordance with regulations of Universiti Teknologi MARA (UiTM). It is original and is the result of my own work, unless otherwise indicated or acknowledge as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulation for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Nursyazreen Binti Ahmad Mirza  
Student's ID No. : 2010226002  
Programme : Master of Science in Civil Engineering (EC780)  
Faculty : Faculty of Civil Engineering  
Thesis Title : Strength and Characteristic of Composite  
Modelled of Kaolinite Clay and Crushed  
Siltstone As Landfill Liner

Signature of Student :  .....

Date : May 2014

## ABSTRACT

This thesis presents the findings of laboratory work on behavior of landfill liner using crushed siltstone and kaolinite. The selection of landfill liner are based on compatibility with the soil environment, resistance of load from waste, and also groundwater levels. Inspired by using waste material as engineering purpose, therefore this study is to determine the physical properties of composite kaolinite clay-crushed siltstone liner, to predict the effect of composite on hydraulic conductivity and engineering characteristic of composite kaolinite clay-crushed siltstone liner and also to analyze the settlement result by using Plaxis Modelling. There is a paucity of the previous research, where the study on the liner material is lacking. Therefore, in the present study, an alternative liner made of composite material is studied and developed. The waste material that had been used in this studied was crushed siltstone which then sandwiched with kaolinite layers and vice versa. The crushed siltstone and kaolinite clay was modeled in laboratory by sandwiching them in layer according to proportion thickness of intermediate layers range between 10% to 50%. Several geometry profiles were developed in which siltstone is placed at the middle and vice versa. All specimens were prepared and tested in accordance with BS 1377 standard. From the observation by conducting the testing, the physical properties of specimens was meet the requirement of Environment Protection Health (EPA). Strength characteristics of each composite were analyzed and discussed accordingly. Furthermore, it was noticed that the composite material can influence the compressive strength of composite materials. Strength is increased when the siltstone layer is located as an intermediate layer. Instead, the strength was decreased when the clay layer acts as an intermediate layer. Furthermore, it showed that the different geometric profiles had also influenced the hydraulic conductivity of flow rate. The crushed siltstone permits higher permeability as compared to kaolinite which gives a low permeability. As conclusion, combination of these two materials as laminated material provided a good requirement in term of strength of liner and also hydraulic conductivity for liner. The finding has contributes some knowledge and information regards to the use of waste material in geo-environmental engineering application.

## **ACKNOWLEDGEMENTS**

Foremost, I would like thanks to Allah S.W.T for His mercy and guidance in giving me strength to complete this research. Thanks to my supervisor, Dr. Kamaruzzaman Mohamed for his valuable guidance, encouragement, patient, advices and suggestion which are very helpful in finishing this study. Thank you so much for your time to share your great knowledge. I would like to express my sincere thanks to those who help me directly and indirectly. Thanks to my beloved parents Ahmad Mirza B. Muhaiyudin and Nor Aizan Bt Ali for giving me endless support, help, advices and encouragement in the completion of this Master. Your love is beyond any words. Thanks also to my siblings for their supporting.

It is never complete without wishing a deepest thanks to my Co-Supervisor, Dr. Mazidah Mukri who always give support and also guide me in writing paper, Dr. Haryati Awang, Mr. Muhammad Azahar Abdul Razak, Mr. Akhbar Abdul Hamid, Mr. Muhammad Fuad Ahmad for their helping directly and indirectly in completion this thesis. My thankfulness also goes to my friends Maisarah and Nor Azniza Resali for encouragement and support during to completion this research period. Last but not least, my appreciation goes to RMI who support financially the project.

Finally, may Allah SWT bless all their contributions and kindness. Amin

<b>AUTHOR'S DECLARATION</b>	<b>ii</b>
<b>ABSTRACT</b>	<b>iii</b>
<b>ACKNOWLEDGEMENTS</b>	<b>iv</b>
<b>TABLE OF CONTENTS</b>	<b>v</b>
<b>LIST OF TABLES</b>	<b>x</b>
<b>LIST OF FIGURES</b>	<b>xii</b>
<b>LIST OF ABBREVIATIONS</b>	<b>xv</b>

### CHAPTER ONE: INTRODUCTION

1.1	Background of Study	1
1.2	Problem Statement	2
1.3	Objectives of Study	3
1.4	Scope of Work	4
1.5	Significance of Study	5
1.6	Thesis Outline	5

### CHAPTER TWO: LITERATURE REVIEW

2.1	Introduction	8
2.2	Design of Landfill	8
2.3	Liner	9
2.3.1	Types of Liner	10
2.3.2	Materials to Construct Liner	12
2.3.2.1	Natural Material Based Liner	13
2.3.2.2	Synthetic Material Based Liner	14
2.4	Composite Material Based Liner	15
2.5	Strength of Landfill Liner	18
2.5.1	Stress-Strain of Composite Liner	19
2.5.2	Young's Modulus of Composite Liner	20
2.6	Mode of Failures of Soil Under Compressive Strength	20
